

25% OFF CAT CABIN AIR FILTERS

With the Purchase of Two or More

Designed to reduce airborne irritants and create a cleaner and more comfortable working environment for the operator.

Four options to choose from...

- **Standard Efficiency Filters** – recommended for most applications, they are designed to prevent dirt, soot, and other contaminants from entering the cab under normal operating conditions.
- **Lower Restriction Filters** – recommended in situations where there is poor cab air flow. They allow for more airflow into the cab while providing capacity similar to a standard efficiency filter.
- **Activated Carbon Filters** – recommended where odor is a problem. High performance activated carbon ensures a fast rate of absorption. Superior particle removal efficiency removes eye, nose and throat irritants. No adverse effect on airflow, heat or air conditioning performance.
- **High Efficiency Filters** – recommended in extremely dusty environments. Provide higher initial and overall efficiency for improved performance.

DID YOU KNOW?

Replacing the cabin air filter is the first step to ensure your machine's air conditioning system is in top condition this summer!
